

## **Business Applications Developer – 2yr Contract**

At Repak, we are expanding our Information Technology practice and specifically building our Business Applications team. Due to this expansion, we are seeking to recruit two high achieving Business Applications Developers to be part of our growing practice and to support us in our VERDE Programme – Verification & Environmental Regulation Data Exchange.

### **Core Functions**

- To understand Repak’s departments operations in detail and to be able to advise on best practices and a streamlined way of working.
- To be ‘hands-on’ with technologies to configure/customise/extend required features for end-users, perform demos and proof of concept on new projects.
- Be a natural bridge between business departments and our external IT contractor firm.

### **Key Responsibilities**

- For Power Platform: Power Apps, Power Pages, Power BI, and Power Automate. Microsoft Fabric and Copilot is a differential.
- For Dynamics 365 CE: One or more of the following: Sales, Customer Service, Field Service, Customer Insights.
- Designing and customising Canvas Apps and Model Driven Apps.
- Web development and backend programming: HTML, JavaScript and related frameworks, CSS, C#, .NET Framework in general and T-SQL.
- Modelling Dataverse – e.g. tables, fields, forms, views, table relationships
- Business Automation – e.g. Business Process Flows, Business Rules, D365 Classic Workflows and Power Automate Flows.
- Prototype and configure processes to make sure the system works the way Repak needs it to.
- Run workshops with internal leaders, users and consultants to analyse and design solutions for any application, and handle gaps detected during prototyping.
- Contribute to playback meetings to clearly explain our recommended technical solution to users.
- Ensure that solutions always deliver the expected end-user benefits by liaising with Programme Manager, Users and Team Leaders.
- Ensure consistent high quality practices, following governance of technical solution guidelines.
- Troubleshoot technical project issues in a timely fashion.

- Support key stakeholders through deployment to go live, and complete handover documents as required.
- Maintain relevant knowledge related to third-party products that may offer value to clients.
- Exposure to enterprise planning and delivery tools such as Azure DevOps.
- Facilitate and accelerate the decision process, considering Repak's business strategy, drivers, requirements, and challenges whilst bearing in mind the relevant industry trends.
- Experience of working with requirements and business process mapping skills.
- An ability to create and maintain high quality technical specification documents.
- Recognise any inconsistency, assumptions and identify critical elements.
- Excellent communication skills - demonstrated experience standing in front of a room to either identify and collect requirements or to guide training and help users become confident working with the latest technology.
- Document system settings and prepare Repak users to use the system.
- Support testing of the proposed system solution and train users.
- Agile Software Development experience.
- Use your knowledge and the Microsoft collective knowledge to identify and propose the best possible solution for Repak.
- Key contributor during project implementation, from the requirements analysis, system configuration, gaps definition, test enablement to the go-live support.

### **Skills & Attributes**

- Critical thinking
- Proactivity
- Self-learning skills
- Excellent communication skills

### **Qualifications**

- D365 and/or Power Platform Certifications (MB-210, MB-220, MB-230, MB-240, PL-100, PL-210) or newer.
- 2-3 years of Experience developing Microsoft Dynamics 365 CE or Power Platform ideally in a Consulting role or similar.
- Business Analysis skills.
- Experience in using Azure DevOps.
- Experience implementing Microsoft Dynamics 365 Business Central
